Pleuropulmonary Blastoma (PPB) – CT Findings

CT and/or plain film x-ray findings may include:

- Benign-appearing, multi-septated, thin-walled cyst(s) with or without pneumothorax (type I or type IR)
- Partial opacification of a portion of the lung suggesting pneumonia (type II or type III)
- Complete opacification of the hemithorax (type III)
- Cystic-solid or solid mass (type II or type III)
- Mass or cyst or tension pneumothorax causing mediastinal shift (type I, II, or III)
- Pleural effusion or suspected empyema (type II or type III)
