Sample Citation and Introduction to Citing Letters and Other Personal Communication

The general format for a reference to a letter or other type of personal communication, including punctuation:

- **Letter:**

  Anfinsen, Christian B. (Department of Biology, Johns Hopkins University, Baltimore, MD). Letter to: Cyril Ponnampерuma (University of Maryland, College Park, MD). 1991 Apr 23. 1 leaf. Located at: History of Medicine Division, National Library of Medicine, Bethesda, MD; MSC 496, Box 8, Folder 3.

- **Other personal communication:**
Documents generally available to scholars in an archive or a depository can usually be included in a reference list. However, many publishers do not permit placing any form of unpublished material in the end references. Most authorities recommend placing references to personal communications such as letters and conversations within the running text, not as formal end references. Include the nature and source of the cited information, using a term or terms to indicate clearly that no corresponding citation is in the reference list. Place the source information in parentheses. For example:

… and most of these meningiomas proved to be inoperable (2003 letter from RS Grant to me; unreferenced, see "Notes") while the few that …

Unless the letter resides in a library or other public archive, the author of a publication citing a letter must provide written permission from the cited person (if living) to the publisher or from the cited organization if it is carried in a document such as in internal memorandum that is not accessible to scholars. Acknowledge such permission in an "Acknowledgments" or a "Notes" section following the text of an article or at the end of a book's main text. Such statements may include additional details, such as the reason for the communication.

The rules below apply when a letter is included in a reference list rather than within the text as described above. Letters are similar to manuscripts in that they contain little information from which to construct a citation. They lack titles, and have no place of publication or publisher. References to letters differ from manuscripts in that they have a formal structure applied to clearly identify the author (initiator) and the recipient (receiver) of the communication. Because of the lack of other information to include in a citation to a letter, providing the full names for both author and recipient is recommended as well as any clarifying notes on its content.

For information on citing collections of letters, see Chapter 14 Manuscripts and Preprints. For information on citing letters to the editors of journals, see Chapter 1A Journal Articles.

Most examples for citations to letters provided in this chapter are taken from the Modern Manuscripts Collection of the National Library of Medicine. Since the Collection is
housed organizationally within the Library's History of Medicine Division, many items are historical in nature. However, the rules provided are applicable to contemporary material. Other types of personal communication, such as conversations, are not included in the examples for this chapter because they are so rarely seen in a reference list.
