Parafoveal Fixation

This can readily be distinguished from foveal fixation by means of an ordinary Hamblin Lister-Morton Ophthalmoscope, the standard condenser of which has been replaced by this accessory. A blue filter, on which appears a central white circle, is incorporated in a condenser specially computed for focusing an image of the circle on the patient’s fundus.

Procedure

When using the fixation finder, the ophthalmologist instructs the patient to look into the instrument, directly at the circle, and to keep the other eye closed; both eyes are tested in turn (a mydriatic is at times an advantage). The area used for fixation, contrasted by its white illumination against the general blue lighting and circumscribed by a dark ring, can be plainly seen ophthalmoscopically. The ophthalmoscope head, for an emmetropic patient, is set rather less than 1 cm. up the pillar of the instrument; for a myope, the head will be nearer the handle; for a hypermetrope, it will be farther up the pillar.

a Lister-Morton Ophthalmoscope Accessory

Until complete familiarity has been gained, two minor difficulties may be experienced in the use of the fixation finder. Firstly, the patient may not immediately see the circle; in such a case, he should be told to search for it directly into the light, which should be dimmed. Secondly, the observer himself may not directly locate the circle; this trouble can be overcome by initially observing the image on an indifferent surface, such as the patient’s forehead through the sight-hole of the ophthalmoscope. The hold so gained on the instrument is preserved for examining the patient.
"We did not want to leave Wigmore Street. We thought it was a nasty blow after so many years. How glad we are, however, that we were forced to do so. Larger, lighter, and all on one floor, our new premises have greatly pleased all who have entered therein."

Introducing the NEW
DIXEY ERISIPHAKE PUMP

This unit has been specially developed to give consistent and reliable operation for long periods with the minimum of attention.

It incorporates a hardened and ground stainless precision gear pump and a unique oiling system which ensures that the pump is always working under optimum conditions.

It is supplied complete in carrying case with footswitch, Barraquer Cannula-handle and rubber tubing and is suitable for operation on AC or DC mains.

We shall be pleased to supply further details on request.
D 1190 & D 1191. Barraquer's Brushes, small and large, boilable.
D 609. Barraquer's needleholder, latest model.
D 1203. Barraquer's Colibri Forceps, for corneal suturing, etc.
D 440. Erisiphake (cup made to the Barraquer specification).

Catalogue sent on request.
120 YEARS OF UNBROKEN SERVICE

The firm of Alfred Hawes was established in 1840, and is actively controlled today by descendants of the Founder.

Up-to-date techniques and this long experience enable us to offer the widest possible service, but we have never departed from the tradition of personal attention to individual requirements.

That tradition is faithfully maintained in all our branches. We look forward to dispensing the requirements of your patients.

MAYfair 0128
DEMONSTRATION
of the
LIVING FUNDUS

For consultation and teaching,

an accessory mirror is now available for the Polyscope. It enables a spectator to obtain a clear view of the area under examination. He does so by temporarily stealing a portion of the field from one of the wearer's eyes. Since the apparent intensity of the light is not reduced, the patient is not called upon to tolerate any undue brilliancy.

The wearer need not himself touch the mirror, which can instantly be brought in and out of position by the spectator.

The mirror is light, compact and so unobtrusive that, once it has been clipped to the instrument, it need never be removed.

INSTRUMENT DEPARTMENT : 36 NEW CAVENDISH ST., W.1
THE TEST OF TIME

For 25 years
KEELE\nMajor Electro-Surgical Units
have been used and trusted in eye hospitals throughout the
world. They are
RELIABLE — SENSITIVE YET POWERFUL
— COMPREHENSIVE
During an operation the surgeon may call for any of the
following, instantly available, services:
Diathermy — CAUTERY — Catholysis & Electrolysis
— Instrument lighting — Eye Warming

THE TEST OF SERVICE

For 25 years
The KEELE\r
Diathermy Service has been
at the Surgeons' disposal. Skilled staff, with the experience
that only comes from years of continuous service, are on call
at 24 hours' notice. They bring a Keeler Electro-Surgical Unit
and complete range of instruments and electrodes ready for
any type of eye operation.
Immediate advisory, maintenance and repair facilities
are of course available to hospitals where Keeler Electro-
Surgical Units are used or about to be installed.
BOWL made of transparent plastic. White screen painted on the inside; meridians and parallels engraved on the outside. Illumination uniform and adjustable.

Ever-clear TEST OBJECT projected from the outside, the position of which is easy to mark.

During the testing, the limits of the visual field are designed straight on the bowl. After examination, they are recorded on special tracing paper CHARTS. Scotomas can be recorded apart, directly traced on the bowl, with the accuracy of a CAMPIMETER.

Since 1927, specialized experience in the design and production of ophthalmic instruments have impressed upon us the value of such attention to detail.

**RECUMBENT SPECTACLES**

A redesigned version of the McKie Reid Recumbent Spectacles

Reading in bed can easily prove uncomfortable and tiring to the healthy; bed-ridden patients, particularly those with arthritis or paresis, may find what should be a solace to be burdensome or impossible.

HAMBLIN RECUMBENT SPECTACLES enable the wearer to read, even when fully supine, with the book comfortably propped on his chest. In their new form, these prism-bearing spectacles are light, strong and optically rigid; they are easily adjusted. The prisms are free from chromatism and distortion. Provision has been made for a reading correction to be added.

**THEODORE HAMBLIN LTD**

Fashion Frames

for rapid, deep, safe, short-lived, cycloplegia and mydriasis use

Mydrilate

One or two drops of MYDRILATE (cyclopentolate HCl) in the normal eye will produce, in the average subject:

Maximal cycloplegia in 15-45 minutes, lasting 20-30 minutes.

Recovery, to a reading level, in 4-12 hours.

No appreciable change in intra-ocular tension.

No untoward reactions.

0.5% and 1.0% sterile ophthalmic solution in 15 ml. polythene dropper bottles.

Literature and samples on request.

CLEMENT CLARKE LTD.
INSTRUMENT DIVISION: WIGMORE STREET
LONDON, W.1
Born photographers may not care for equipment which takes from them such varied technical considerations as light values, differential focusing, degrees Scheiner or A.S.A., colour temperature etc. They will, however, appreciate the moderate price of this outfit and the consistently good results obtained from it.
Colour transparencies, suitable for projection in a lecture theatre, are readily made, without photographic knowledge, by anyone in possession of this kit who follows the simple routine advocated. Black and white enlargements can be made from these transparencies for publications; the adjoining photograph was taken in this way by an ophthalmologist who had not previously handled the apparatus. It will be noticed that all planes of the photograph are in sharp definition.

The Hamblin Ultra-Close Accessory Kit is used in conjunction with an Ilford “Sportsman” Camera and “Sportslite” flashgun. The accessories are easily attached to or removed from the camera which is, therefore, always available for normal use.

Alternative areas of either 4½" x 3" or 2½" x 1½" (approximately) may be photographed. The former area is ideal for photographing the two eyes. The latter covers rather more than one orbit; it has been chosen partly to give the photographer some room for errors in alignment and partly to increase the depth of focus. Definition is adequate for considerable enlargement, as may be seen from the example, made from a portion of the original.

Developed at the suggestion of A. J. Ogg, Esq., F.R.C.S., the kit incorporates several of his valuable ideas, amongst them a simple device for including a small label (bearing, perhaps, a case reference number) near one edge of the photograph.

A Pamphlet will gladly be sent.
This is the NEW BRITISH Curpax SLIT LAMP

BASIC SLIT LAMP & MICROSCOPE UNIT £150

The portable model illustrated here was designed by us for Professor Ida Mann to aid her Trachoma research. It is available in a number of other combinations. Made by the Instrument Division of CURRY & PAXTON LTD

xxx
The Stereoscopic Microscope is readily detachable for RECUMBENT GONIOSCOPY

The BASIC UNIT may be fitted
